

Team Building Assignment

Team Members:

Devila Bakrania, Abhishek Singh, Aditya Sonawane, Aditya Shenoy, Heramb Dharamadhikari, Vinay Balani

Agenda of the meeting

- Introduction
- Topic of Interest
- Project Topics Discussion

Meeting Notes:

- We welcomed each other to the group and exchanging greetings
- The introductions helped us understand each other's backgrounds along with their strengths and some of the improvements we would like to implement by the means of this course.
- The biggest strength of our groups is the diversity in the experience and field of study the members belong to.
- The interests are also a mix of sports, music, dance, and a bit of fitness.
- Lastly, we discussed some topics that we had in mind for our final project. We had a second meeting as we wanted to brainstorm after some introspection and some research about available datasets. We finalized with 2 topics as follows:
 - Sentiment analysis of tweets with the phrase "social distancing" with the mapping of positive and negative impacts spread by retweets over a specific time. We can show the spread of the impact with a differentiating color (red and green) of nodes.
 - Logistics and Delivery network of Online Shopping Marketplace. We can map the delivery routes and times according to location distances and availability of the commodity/product.
- We would like to take a call on which project to proceed with once we have learned more about how to work with datasets in the next session of the class.
